

Virginia Aviation supported by Precision Windsports (both of Lynchburg, VA) are offering experimental light-sport aircraft (E-LSA) courses. The courses are held at Lynchburg Regional Airport (KLYH), Lynchburg, VA. This course provides required training for those who own (or plan to own) E-LSA weight-shift control aircraft to be eligible for the FAA light-sport repairman certificate with inspection rating. This certificate authorizes owners to perform their own annual inspections.

The course contents include: regulations, resources, tools, inspection procedures, personal safety, weight-shift aerodynamics, aircraft systems, and inspection log entries. Included will be practical exercises to reinforce course material.

Course cost is \$375.00.
