DO YOU WANT A CAREER IN A RAPIDLY GROWING INDUSTRY?

The U.S. Department of labor projects that job opportunities for Aircraft Mechanics should be excellent for persons who have completed aircraft mechanic training programs.

Retirements of current mechanics and growth in passenger traffic will create the need for more aircraft mechanics. If the current trend continues, the number of graduates of mechanic training programs will fall short of meeting those needs.

Job opportunities with commuter and regional airlines, FAA repair stations and in general aviation are expected to increase at the fastest rates. Opportunities at the major airlines are expected to be better than they have been recently.

VIRGINIA AVIATION MAINTENANCE TECHNICIAN SCHOOL CAN HELP YOU PREPARE FOR THAT CAREER

Get your Federal Aviation Administration Mechanic Certificate with Airframe and Powerplant ratings after 1900 hours of classroom and hands on training from A&P's with years of industry experience.

Our students learn in a small class environment at Lynchburg Airport and at a nearby Community College where state of the art welding and electronics labs and a well equipped sheet metal shop are used for A&P training.

Virginia Aviation Maintenance Technician School is approved by the Federal Aviation Administration (Certificate No. RSUT804H).

AS AN AIRFRAME AND POWER-PLANT TECHNICIAN, IT'S YOUR JOB TO KEEP PLANES, JETS AND HELICOPTERS IN TOP FLYING CONDITION!
